

IDENTI Solutions

How we use different technologies

Artificial Intelligence (AI)

Is used to produce advanced analytics that support AI-driven decision making.

RFID

is used for the real-time, end-to-end tracking of inventory.

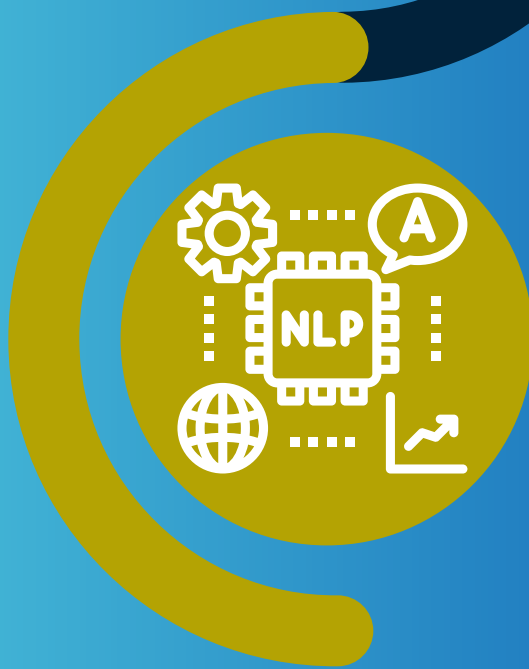

Machine learning

uses algorithms and data sets to categorize information and produce predictive analytics.

Neural Language Processing (NLP)

is used to interpret hand written documentation.

IDENTIFYING THE REAL PICTURE

Advanced, digital technology.
Clinician-friendly tools.
Inventory analytics.
