Company Overview

As a global leader in AI-driven supply chain automation, IDENTI Medical has designed unique point-of-use solutions to revolutionize inventory management in hospitals. IDENTI is a pioneer in incorporating computer vision and machine learning to collect utilization data in complex surgical environments. We believe that cameras and AI vision are the next step in the documentation revolution, eliminating the need for human interaction and leading to fully autonomous documentation.

Workday and (Partner Name) Value Proposition

The collaboration between Workday and IDENTI Medical enhances inventory management with advanced AI technologies. IDENTI automates tasks like consignment billing, expiry management, and replenishment while improving data accuracy and real-time reporting. This reduces waste, prevents shortages, and boosts revenue capture. Streamlined operations lower labor demands, improve efficiency, and provide enterprise-wide visibility, empowering hospitals to make smarter decisions, optimize preference cards, and maintain compliance and strong supply chain partnerships.

Live Integrations

Integration Overview

IDENTI Medical seamlessly integrates with Workday Supply Chain Management and Financials, offering comprehensive tracking and real-time consumption visibility. This integration doesn't replace the Workday system but enhances its functionality by providing validated real-time data for effective inventory control. The integration supports the management of multiple inventory types, including trunk stock, kits, consignment inventory, medical devices, implants, tissue, bulk supplies, and more, ensuring that hospitals can manage their supply chain with greater precision and efficiency. IDENTI set of patented-protected products integrated with Worday include: Snap&Go AI-vision sensor for point of use charge capture, TotalSense UHF RFID implant tracking system, and automated Kanban & PAR solutions, such as the first ever Wireless PAR Weight-Based Bin.
